N: dispatch E: issue Dotted: elided cycles Defense-specific

```
i2    jne    .end                  Mispredicted: wrong path below
      leaq   48(%rsp), %rdi
i3    movq   (%rdi), %rax          Speculative load: %rax tainted
i4    jne    .end                  Correctly predicted
      leaq   64(%rsp), %rdi
i5    movq   (%rdi,%rax), %r15     xmit: tainted address
```

STT rule: a load's result stops tainting younger instructions once every older branch has resolved. On a mispredict that is also the moment the squash starts, and the squash needs commitToIEWDelay cycles to reach the load queue.
